## PROJECTS

### Cryptocurrency App using React JS | Url:[Project 2](#)

- With my background in creating creative solutions, I led the development of a cutting-edge React JS bitcoin tracking application. Real-time data streams and interactive graphics are easily integrated into this dynamic platform, guaranteeing a seamless and enjoyable user experience.
- Made use of responsive design techniques to ensure optimal performance across a variety of devices, enhancing accessibility for a broad user base.

### Multi Functional Robot Based on IOT | Role: Circuit Designer

- Developed a state-of-the-art self-navigating robot that uses ultrasonic sensor technology to identify obstacles. By using sophisticated algorithms for making decisions, the robot automatically changes direction when it comes across impediments. After carefully examining its left and right sides, it chooses the path with the most space available.

### Sahyadree Soft Tech (Company Portfolio) Using WordPress | Jan 2024– Feb 2024

- Developed a tailored WordPress theme for the Sahyadree Soft Tech website, focusing on unique design and
  - functionality requirements to enhance user experience. Expertly configured essential plugins, ensuring seamless navigation and interactivity.
